xData

Workshop Pack for schools

Everything a teacher needs to run a privacy and AI safety session with the xData app: a 50 minute plan, short formats, activity sheets, the answer key and safeguarding notes.

Before you start

- Pupils open the xData web app on a phone, tablet or laptop. Pairs are fine. No accounts and no sign-up.
- Pupils aged under 18 choose the **Under 18** path. Staff and adult learners choose **18 and over**.
- Progress is stored on each device only. You cannot see pupil results, so use the activity sheets to check understanding.
- Try the lesson yourself first. Each lesson takes about 10 to 15 minutes.
- Read the safeguarding notes on the last page and follow your school policy.

Choose a format

Format	Time	Best for	What happens
Assembly starter	20 min	Whole year group, one screen	Show the red-flag text on the screen, vote with hands, share three rules.
Classroom workshop	50 min	One class, pairs on devices	Starter, one app lesson, scenario cards, pledge. Full plan on the next page.
Cyber week drop-down	3 x 50 min	A day or a week for a year group	Session 1: personal data and passwords. Session 2: scams and identity theft. Session 3: deepfakes and chatbots.

50 minute classroom workshop

Topic: **Spot the phish** (lesson 3). Swap in any lesson from the library. Keep the same shape.

Minutes	Part	What you do	You need
0 to 5	**Welcome and ground rules**	Say what the session covers. Agree three rules: use made-up examples only, no shaming anyone who got caught out, tell an adult if something worries you. Show the Childline number: 0800 1111.	Slide or board
5 to 15	**Starter: what looks wrong?**	Show the scam text from the lesson on the screen. Pupils write down every red flag they can see in 90 seconds, then compare in pairs. Reveal the flags: fake sender name, surprise payment, odd web address, time pressure.	Activity Sheet A
15 to 35	**Pairs on the app**	Pairs open xData and complete **Spot the phish**. One reads aloud, one taps. Tell them to swap roles at the quiz. Walk round and listen for the explanation after each wrong answer.	One device per pair
35 to 45	**Scenario cards**	Groups of four take a card from Activity Sheet B and decide what they would do first. Each group shares one decision. Use the answer key for the teacher view.	Activity Sheet B
45 to 50	**Plenary and pledge**	Each pupil writes one thing they will do differently on the pledge card. Pick two volunteers to read theirs. Remind them where to report: forward scam texts to 7726.	Pledge card

Preparation checklist

- Open the app on your own device and finish the lesson once.
- Check pupil devices can reach the web app. If not, use the assembly format with one screen.
- Print Activity Sheets A and B and the pledge cards, or have pupils copy the text.
- Read the safeguarding notes and know who your designated safeguarding lead is.

What good looks like

- Pupils name at least three red flags without prompting.
- Pupils say they would check another way (official app or website typed by hand) before tapping a link.
- Pupils know where to report and that being fooled is not their fault.

Activity Sheet A: Spot the red flags

Name: _____ Class: _____

Read this text message. Circle or underline everything that makes you suspicious.

> **URGENT:** your parcel is on hold. Pay a £1.99 fee at parcel-redeliver.xyz within 1 hour or it will be returned.

1. List three red flags you found.

_____

_____

_____

2. What would you do first? Tick one.

- Tap the link quickly before the parcel is returned.
- Open the official delivery app or type the website address myself.
- Reply with my card details.
- Forward it to my friends.

3. Where can you report a scam text? _____

Activity Sheet B: Scenario cards

Cut out the cards. Groups of four pick one and decide what to do first.

Passwords A friend asks to borrow your password to finish a game level.	**Deepfakes** A video of a famous person says something shocking. Everyone is sharing it.
Voice clones A call sounds like your cousin and asks for money fast.	**Chatbots** A chatbot asks for your full name and school before it will help with homework.
Identity theft You posted a photo of your new bank card and your friends say it looks great.	**Phishing** You tapped a link in a text and typed your email and password before you noticed.

Pledge card

Cut out and keep.

My xData pledge

One thing I will do differently:

_____

_____

Name: _____ Date: _____

Need to talk? Childline is free on 0800 1111. Forward scam texts to 7726.

Family safe word card

Agree a word with your family that only you know. If someone calls asking for money or help, ask for the word. If they cannot say it, hang up and call back on a number you already know.

Our safe word is: _____

Teacher answer key

Every question in the app, with the answer and the explanation pupils see.

What is personal data?

Which of these is personal data?

Answer: Your home address. An address can lead someone to you, so it is personal data.

A photo of your face can be personal data.

Answer: True. A photo can identify you, and sometimes shows where you were.

Safe or risky? Posting your school name and daily bus route on a public profile.

Answer: Risky. Together they show strangers where you will be and when.

Tap the details you should not post publicly.

Answer: 22 Park Lane, 07700 900123. Your address and phone number should stay private.

Strong passwords

Which password is strongest?

Answer: coffee-tiger-lamp-river. Several random words make a long password that is hard to guess.

Using the same password everywhere is fine if it is long.

Answer: False. If one site leaks it, attackers can open all your accounts.

Safe or risky? Sharing your password with a friend so they can play on your account.

Answer: Risky. Once shared, you lose control of it. Friends can share it on.

What does two-step verification add?

Answer: A second check, such as a code, after your password. A second check stops someone who has only your password.

Spot the phish

Tap the red flags in this text message.

Answer: a £1.99 fee, parcel-redeliver.xyz, within 1 hour. Pressure, a payment request and a strange link are classic scam signs.

A text says your bank account is locked and tells you to tap a link. What is the best action?

Answer: Open your bank's official app or call the number on your card. Always contact your bank through a route you already trust.

Scammers can fake the sender name shown on a message.

Answer: True. Anyone can type a company name as the sender.

Safe or risky? Typing a website address yourself instead of tapping a link in a message.

Answer: Safe. Typing it yourself avoids fake links.

Identity theft

Which details are most useful to an identity thief?

Answer: Your date of birth and address. Banks and companies often use these to check who you are.

You only need to worry about identity theft if you are rich.

Answer: False. Thieves use anyone's details to take out credit or open accounts.

Safe or risky? Posting a photo of your new bank card.

Answer: Risky. The card number and security code can be used to pay.

You see a payment you do not recognise. What do you do first?

Answer: Contact your bank straight away. The sooner your bank knows, the sooner it can help.

Deepfakes

A shocking video of a famous person appears. What is the first check?

Answer: Do trusted news sites report it?. Quality and likes can be faked. Trusted reports are a better check.

If a video looks very realistic, it must be real.

Answer: False. Modern deepfakes can look very real.

Safe or risky? Sending money after a call that sounds like your relative, without checking another way.

Answer: Risky. Voices can be cloned. Call back on a number you already know.

What helps protect against voice clone scams?

Answer: A family safe word and calling back on a known number. A safe word and a call-back check out a caller.

Chatbots and your data

Which should you never type into a chatbot?

Answer: Your card PIN. PINs and passwords should stay private.

AI chatbots are always correct.

Answer: False. They can sound sure and still be wrong. Check important facts.

Safe or risky? Asking a chatbot for study tips without using your real name.

Answer: Safe. No private details are shared.

Tap the details you should not give a chatbot.

Answer: Priya Shah, Leeds High School, blue-moon-77. A full name, school and password are private.

Safeguarding and delivery notes

These notes support your own school policy. They do not replace it.

Before the session

- Tell your designated safeguarding lead (DSL) what you are running and when.
- Check pupils know who to talk to in school.
- Use only made-up examples. Do not ask pupils to share their own accounts, messages or photos.

If a pupil says something worrying

- Listen calmly and do not promise to keep it secret.
- Follow your school safeguarding policy and report to the DSL the same day.
- Pupils can also call Childline free on 0800 1111.

Sensitive topics

- The deepfakes lesson mentions fake intimate images. Handle this with care and tell pupils sharing such images can be a crime.
- Some pupils may have already been caught out by a scam. Say clearly that being fooled is not their fault.

Data and privacy

- This version of xData has no accounts. Progress and any reflections stay on the pupil's own device.
- xData does not run adverts and does not sell data.
- Pupils can delete their data from the Privacy screen in the app.
- Run your own data protection check before using any app with pupils.

Curriculum links

These topics support online safety and personal development teaching, including Computing, PSHE and RSHE online safety content. Check the exact wording against your own scheme of work.

Content status

All lessons are drafts and are awaiting legal and privacy review. Sources are listed in the Resource Library on the xData website.
